DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4 and 14-16, drawn to a chemical luminescence method, classified in class 435, subclass 7.9.
- II. Claims 5-13, drawn to a reaction apparatus, classified in class 436, subclass 518.

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus as claimed can be used to practice another and materially different process, such as synthesis or purification processes.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

While both the apparatus and method claims were examined for the previous Office action; upon reconsideration, the restriction requirement is deemed proper for the reasons set forth above. Upon election of an invention, Applicant's arguments filed October 23, 2006 will be addressed.
